

Workforce Development

Training and credentials power the building performance workforce

Not just a job. A career making homes efficient, safe, and comfortable.

Transforming the workforce

With training, continuing education units (CEUs), and technical support from Slipstream, new workers can pursue their first job in the building performance industry. Seasoned workers can gain new skills to advance their career. Partner with Slipstream to achieve your workforce development goals.

Understanding the scientific principles behind how the home operates as a system is the foundation for accurately assessing opportunities to reduce energy use, performing high quality energy retrofits, and inspecting the quality of completed jobs.

Slipstream's workforce development solutions are grounded in industry experience and delivered through virtual, classroom and in-field training. We enrich the skill and confidence of hundreds of contractors, weatherization workers, and building performance professionals every year.

BUILDING SCIENCE TRAINING

Slipstream has been supporting the development of tomorrow's building performance, weatherization, and energy auditing workforce for more than 40 years. We are an approved training provider for DOE's Weatherization Assistance Program (WAP), and hold IREC accreditation for our Energy Auditor, Retrofit Installer, Crew Leader, and Quality Control Inspector training programs.

Building Performance Institute (BPI) Test Center

Employers trust nationally-recognized credentials. Professionals need the skills behind the credentials to advance their career. Slipstream provides virtual and live trainings in support of several BPI certifications and certificates as well as written and in-field exam proctoring.

Online training for CEUs

Our state-of-the-art learning management system (LMS), Slipstream U, offers a range of virtual training options adaptable to your workforce training needs.

Customized training

Slipstream works with clients to develop customized training strategies and curricula, as well as live and online courses to support specific needs, including train-the-trainer support.

On the job mentoring

Our trainers work with individuals on technical challenges faced in the field, guiding them through hands-on practice with diagnostic, installation, and quality assurance procedures.

HEAT PUMP TRAINING

Slipstream has earned the **U.S. Department of Energy's rigorous Energy Skilled™**

designation as a training provider for Comfort Advising and Heat Pump Installation. We are also a **measureQuick™** certified trainer.
