Axiom Cloud
Apps for Commercial Refrigeration

As a leader in refrigeration, what keeps you awake at night?

INCREASINGLY LARGE ENERGY BILLS?

- Refrigeration is 40-60% of electricity use & often operates inefficiently
- Demand charges are increasing everywhere

HIGH MAINTENANCE COSTS?

- Repeated truck rolls and overtime visits due to inexperienced technicians
- Unplanned equipment outages (causing demerchandising events)

ALARM OVERLOAD?

- Hours spent manually processing refrigeration system information
- Facility managers are often required to be refrigeration technicians

REFRIGERANT MANAGEMENT?

- Leaks lead to inefficient operation & high GHG emissions
- Regulations are forcing the transition to lower GWP options

SOMETHING ELSE?

Axiom Cloud's apps help solve commercial refrigeration's biggest energy, maintenance, and sustainability challenges

Facilities AnalyzerTM (Required)

Predictively identify refrigeration problems before you receive a flood of alarms. See multi-site refrigeration & energy data in a single dashboard.

Virtual TechnicianTM

Autonomously solve refrigeration maintenance and energy problems using software, instead of rolling a truck every time.

Virtual BatteryTM

Effortlessly save on your energy bill and get paid by your utility by transforming your refrigeration system into an intelligent battery.

Supercharge your existing systems

Axiom's apps supercharge existing Micro Thermo, Emerson, Logic, and other controllers with new capabilities:

Existing Controller	✓	✓							
Traditional Alarm Monitoring		✓	✓	(optional)					
Axiom Cloud Apps		(optional)	(optional)	✓	✓	✓	✓	✓	✓
	Refrigeration Control	Reactive Threshold Alarming	Alarms via phone/email	Multi-site Visibility and Analytics	Predictive work orders with root cause	Multi-site Setpoint Standardization	Refrigerant Leak Detection	Autonomous Fixes	Active Energy Optimization

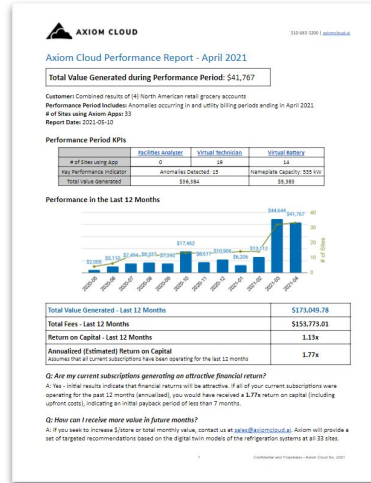

Installation is simple, requires < 1 day, and oftentimes there is *no new hardware required*.

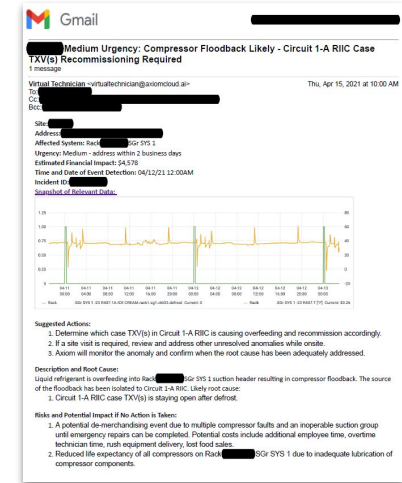

See measurable benefits - *without additional work for your team*

Customer Web Portal
*Multi-site dashboard
(available 24/7)*

Performance Reports
*Quantifies benefits and ROI
(delivered monthly)*

Anomaly Notifications
*Sent when urgent problems or
opportunities are identified*

Distribution Center Case Study - HelloFresh

Axiom Cloud's apps are active at a HelloFresh fulfillment center in Northern California, where energy costs, sustainability, and refrigeration uptime are large concerns.

Benefit	Description	Annual Value
Continuous Commissioning	Continuous optimization and monitoring of refrigeration system setpoints and control strategies	\$31,573
Energy Bill Optimization	Predictive pre-cooling and intelligent load-shedding to reduce energy bills	\$21,271
Demand Response (Capacity Bidding Program)	Safely leveraging refrigeration loads to reduce energy consumption on demand and generate new revenue	\$8,547

Virtual Battery - Demand Response

Total Baseline Refrigeration Power | Total Actual Refrigeration Power

Total Virtual Battery Offsets

Intelligent Precooling

- Lowers the temperatures of specified spaces prior to an event
- System capacity and food safety requirements are never violated

DR Event (Load Shedding)

- Compressors and EPRs modulated individually to reduce energy use
- Case temperatures gradually come back up to setpoints

Recovery

- Compressors run harder than usual to allow system to fully recover

Results

- 193kW of flexible capacity that is valuable to the utility

Retail Grocery Case Study - Grocery Outlet

Grocery Outlet has recently expanded from a 2-store pilot to ~80 stores, partially funded by Demand Response incentives. Benefits include:

- Demand response revenue through refrigeration thermal energy storage
- Continuous commissioning
- Refrigerant leak detection
- Utility rate plan recommendations

“Without Virtual Technician’s early notification of the leak, this store would’ve experienced unplanned downtime and a big maintenance bill in the coming weeks.”

GROCERY OUTLET
Bergamot Market

Axiom Cloud Case Study

Getting paid to save.

A three month pilot at two Grocery Outlet sites in California’s Bay Area demonstrates a better way to manage refrigeration infrastructure, while receiving utility incentives and creating \$27,000 in projected savings.

“Without Virtual Technician’s early notification of the leak, this store would’ve experienced unplanned downtime and a big maintenance bill in the coming weeks.”

Frank Davis, Director of Refrigeration Engineering, Energy & Sustainability

AXIOM CLOUD

Virtual Battery - Energy Bill Management

Building Actual Power | Building Baseline Power | Refrigeration Power
Virtual Battery Offset | OAT (°F) | Daily Building Target

Intelligent Precooling

- Lowers the temperature of the specified cases
- Increases the load on the refrigeration system
- Does not exceed system capacity or demand thresholds

Load Shedding

- Modulates compressors and EPRs to lower the building's load
- Case temperatures gradually come back up to setpoints

Results

- 28 kW peak demand reduction
- 55 kWh of flexible capacity
- \$1,322 total benefit for the month

THANK YOU

Introduction to Thermal Energy Storage at CJ Foods Fullerton, CA

Who is Viking Cold Solutions

Viking Cold Solutions is a refrigeration energy optimization company delivering solutions that transform refrigerated facilities into more efficient, flexible, and resilient operations.

Our business solutions:

- ▶ Digitize and manage the assets of your business while reducing your cost of operation and improving your sustainability.
- ▶ Reduce operational risk by managing heat infiltration and maintaining more stable temperatures in refrigeration.
- ▶ Deliver real-time business data that helps you manage your assets and operations.

[Watch the video to understand:
Why We Do What We Do](#)

EXECUTIVE SUMMARY

Industrial refrigeration consumes more energy per cubic foot than any other utility load.

We leverage green technology to reduce that energy by 25% or more while better protecting that food.

Our patented, passive system protects food and reduces spoilage, saves energy, and reduces carbon footprint without the need to modify or replace refrigeration equipment.

Viking Cold provides customers numerous valuable and unique benefits:

- Reduced energy costs of 25% or greater
- Utility peak load management, load shedding or shifting
- Storage of renewable energy within the freezer
- Thermal backup in the event of a mechanical failure or power outage
- Real time control, monitoring, and reporting
- Over 20-year useful life
- No capital required up front, can be paid for out of savings using our Service Financing

WHAT IS THERMAL ENERGY STORAGE

Combining Chemistry, Software, and Controls to Optimize Energy Usage

- ▶ Cloud-based IoT: facility digitization and 24/7 real-time analysis that intelligently optimizes temperatures and refrigeration equipment to decrease energy usage and reduce demand
- ▶ Proprietary Phase Change Material (PCM) formulations attract, absorb, and store 300x more heat per pound than frozen food
- ▶ 8x heat transfer rate of frozen food
- ▶ Systems contain no mechanical energy-consuming components and last 20+ years with minimal to no maintenance
- ▶ Integrates with any existing refrigeration or controls system
- ▶ Installs quickly with minimal business interruption
- ▶ Does not reduce usable storage space inside facilities

How Thermal Energy Storage Optimizes Refrigeration Energy Use and Protects Food

- ▶ Existing refrigeration equipment runs fully loaded and more efficiently during cooler hours when energy costs are low to freeze TES and store energy in the form of cold

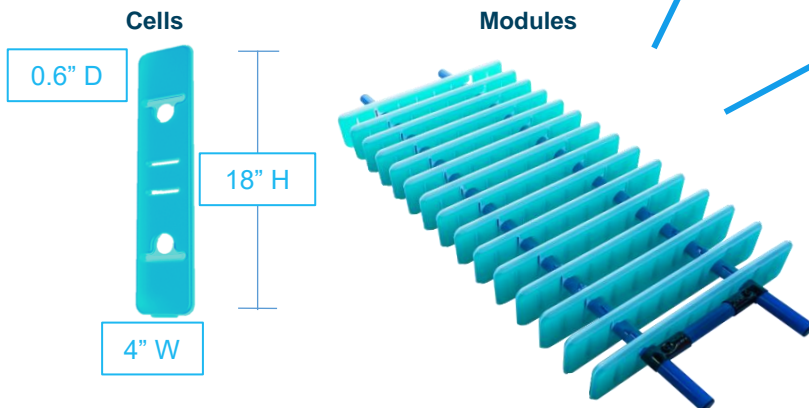

By storing energy in the TES rather than the food:

- ▶ Efficiency is improved: Refrigeration run time and total energy consumption reduced ~25%
- ▶ Up to 90% of peak period consumption reduced and demand risk is reduced

- ▶ Refrigeration equipment can then be idled up to 13 hour per day, usually when energy costs are high
- ▶ TES maintains stable temperatures within the freezer by absorbing up to 85% of the heat infiltration until the optimal time to remove the stored heat

Thermal Energy Storage (TES)

FLEXIBLE MODULAR INSTALLATIONS

Wire-deck PCM modules

Rack extension lay-down PCM modules

Grocery reach-in freezer

Lay-down PCM modules

Ceiling mount PCM modules

PCM Baskets

MULTIPLE OPERATING MODES

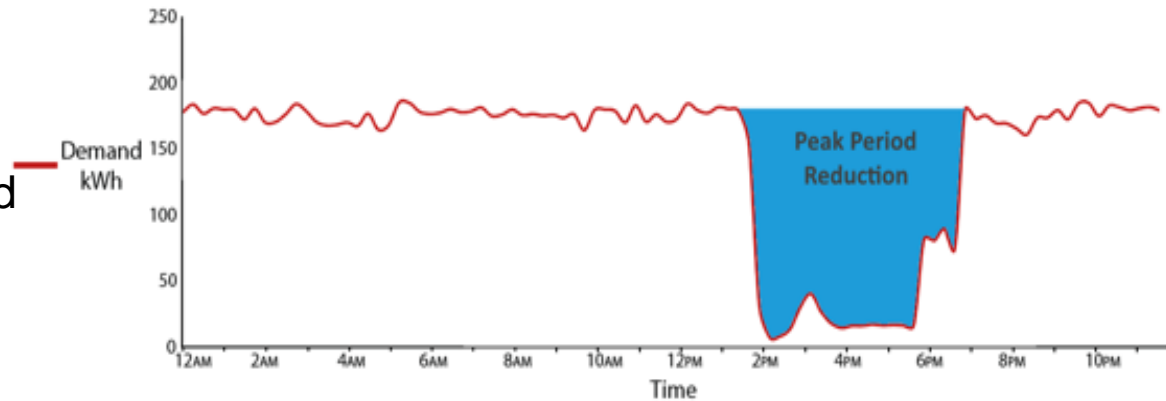

1. Efficiency Savings

Optimize refrigeration performance and use stored thermal energy during the day

2. Permanent Load Shift

Permanently shift load to avoid peak demand during designated periods

3. Nighttime Savings with PV

Utilize PV during the day and thermal energy during the night

THERMAL ENERGY STORAGE BENEFITS

Saves Energy.

Increasing operational efficiency.

Shifts Utility Load.

Operators can choose *when* to purchase power.

Preserves Food Products.

Protecting quality and ensuring safety.

Reduces Carbon Footprint.

Our system is sustainably manufactured, installed, and operated.

Is Driven By Phase Change Thermodynamics and Technology.

A large amount of energy is transferred when changing a liquid to a solid and back. We manage the energy that is transferred during these changes to keep temperatures stable.

CJ FOODS FULLERTON FACILITY

CJ Foods

- ▶ No. 1 Korean Food Company
- ▶ Creating New Culture for Healthy, Happy and Convenient Lifestyles
- ▶ CJ's mission today is to introduce the delicious, convenient and nutritious Korean and Asian food globally

Fullerton Distribution Warehouse

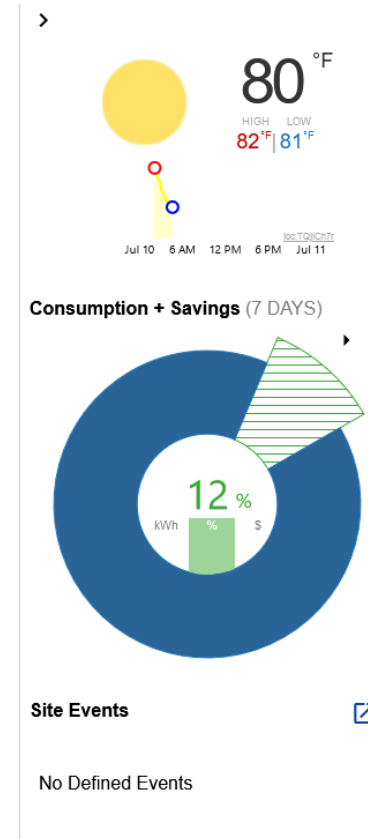

- ▶ 127,000 sq. ft. distribution facility in Fullerton, California
- ▶ Utility Partner: SCE
- ▶ Summer Peak Pricing: \$34/kW between 4pm and 9pm
- ▶ Peak period consumption and demand charges comprise over 50% of the annual energy bill

CJ FOODS FULLERTON FACILITY

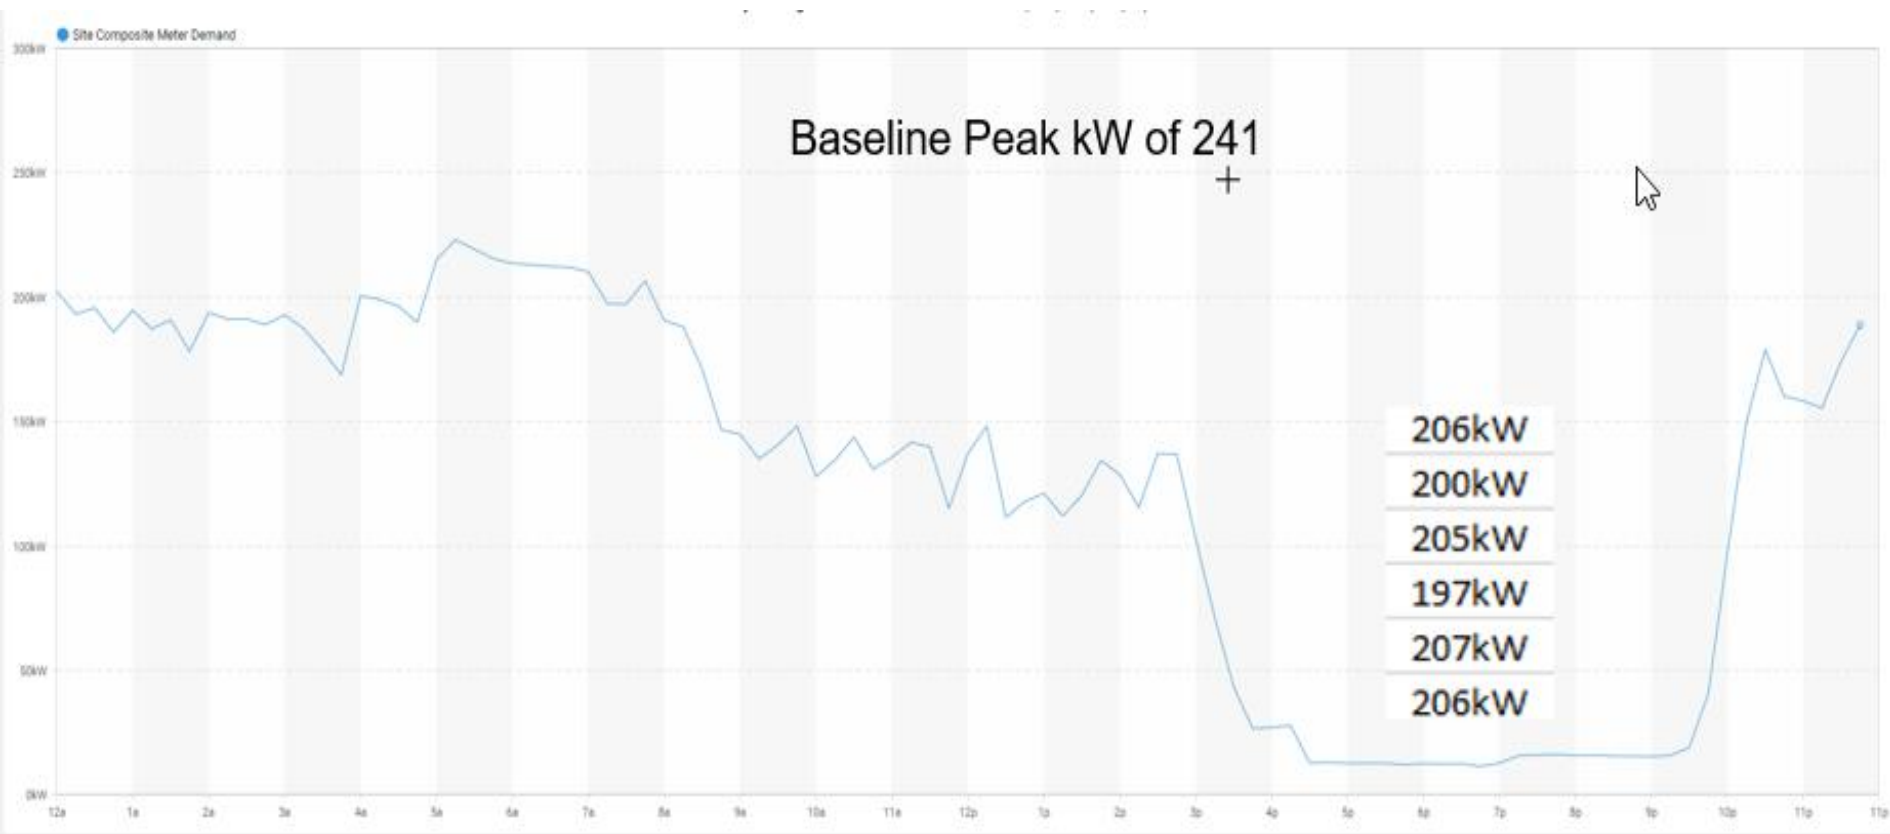

- ▶ Site map of Fullerton using the Viking Cold Chain Portal software
- ▶ 30,000 sq ft of frozen distribution warehouse
- ▶ 10 evaporators, 5 temperature zones and 5 doors
- ▶ All monitored and alarmed

FULLERTON RESULTS

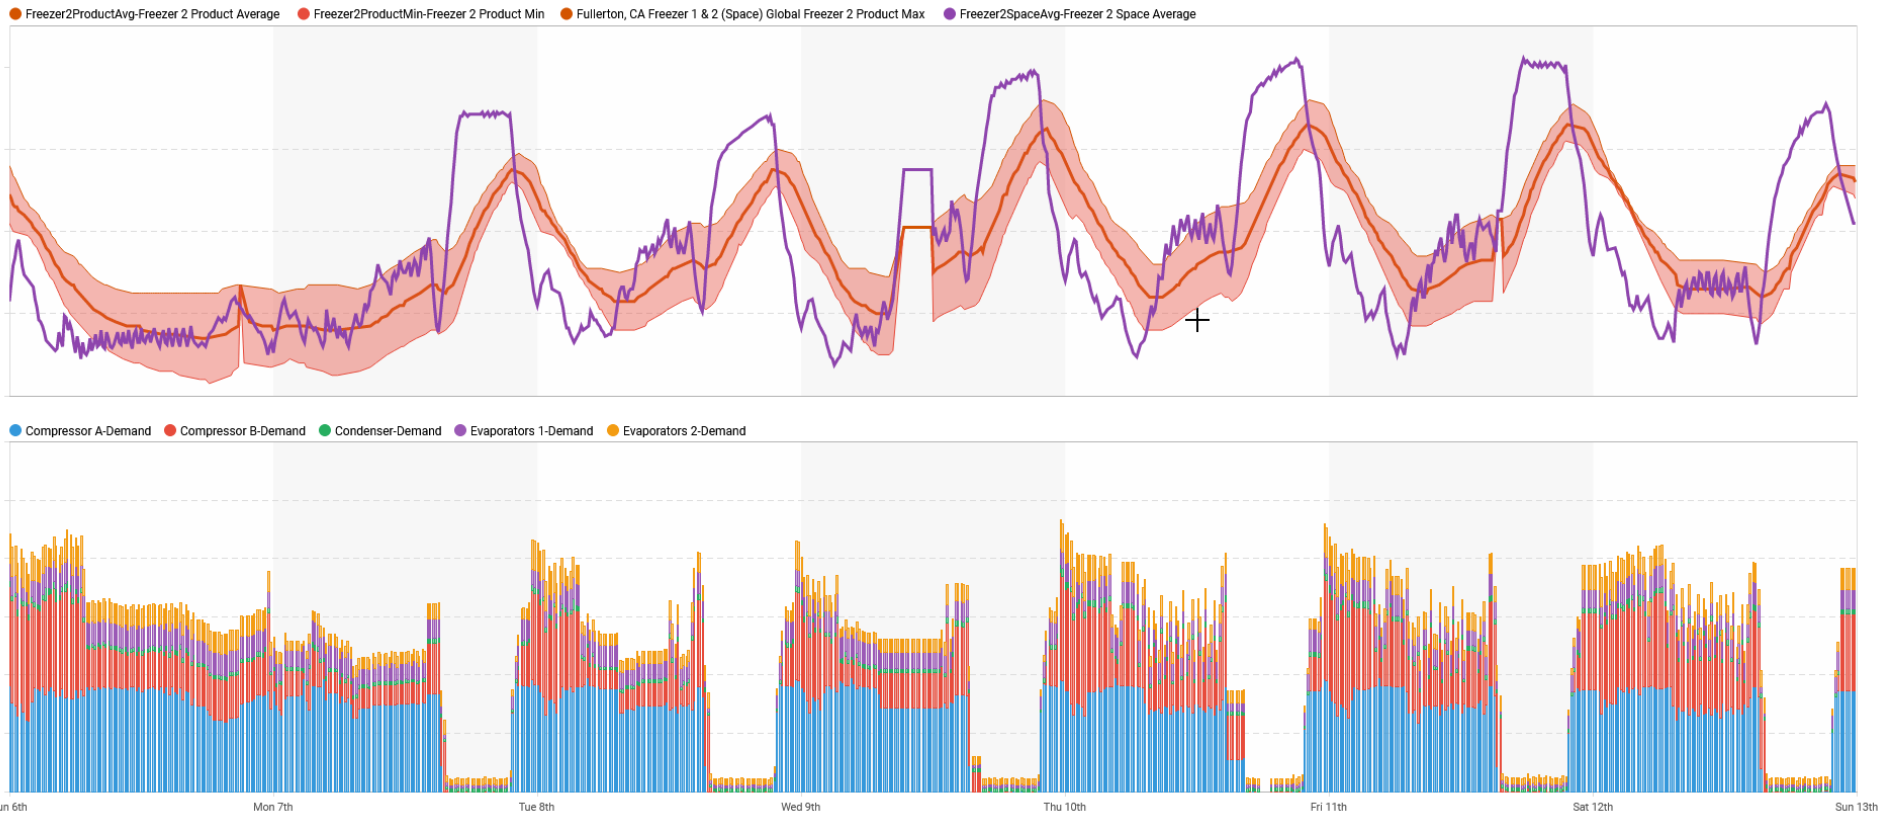

- ▶ Demand Reduction – An average of 200kW/Day - SGIP Promise of 160kW/Day
- ▶ Refrigeration Efficiency Improvement – Annual savings of 14% of consumption

FULLERTON RESULTS

- ▶ Weekly temperature and demand chart demonstrating demand reduction and temperature stability using the Viking Cold zero-degree PCM formula
- ▶ Rate of rise is reduced 70% with the use of Viking Cold PCM
